Hi Michael,

Thank you. CDM Smith will be following up this week with the information from CLP about sample volumes. I have also talked with CDM about communication from the field (Ricky Chenenko) back to USACE and EPA.

Thank you,

Amy

Thanks for following up with this, Amy. Ricky from CDM (I apologize, but I don't know his last name) was on the call with Tanya and I and ARCADIS and can provide additional details about what transpired in the field.

Hi Amy,

Please have CDM contact the CLP representative to determine the minimum volume that can be provided for VOCs, and TAL metals plus cyanide for the pore water samples. It appears that spilt samples were provided but, CDM is concerned that there is not going to be enough volume. Please review the QAPP volumes and the response from the CLP representative to determine if there will be enough volume for the VOCs and metals.

If you have any questions please contact Michael.

Thanks,

Tanya
